WET SCLEROPHYLL FOREST

Habitat: fertile red clays in high rainfall areas (ridges, slopes) or other soils in more sheltered aspects (south and east) and gullies. Replaces Subtropical Rainforest in localities with more frequent fires.

Localities: gullies at Laurieton, west of Lake Innes, extensively around Port Macquarie east of Kooloonbung Creek-Lake Innes and the wider LGA further west as rainfall increases toward the Great Divide and the New England Tableland escarpment.
